Bhautik Sojitra

Phone: +1 431 556 8032 | Email: bhautiksojitra73@gmail.com | LinkedIn: linkedin.com/in/bhautik-sojitra/
Winnipeg, Manitoba, Canada | Open to Relocation (US/Canada)

Technical Skills

Languages: C# (.NET 8), T-SQL, JavaScript, HTML, CSS, JSON/XML, Python, Java

Frameworks: ASP.NET / .NET Core, REST APIs, .NET MAUI, VueJS, React, Django, Kotlin

Databases: Microsoft SQL Server (stored procedures, query optimization), SQLite, MySQL

Cloud & DevOps: CI/CD Pipelines (Jenkins), Docker, AWS, Git, OAuth, Firebase

Practices & Tools: Agile/Scrum, JIRA, Unit & Integration Testing (JUnit, Espresso), Visual Studio, JetBrains Rider, Cursor, Claude (AI-assisted development)

Work Experience

Software Engineer (Full-time) — May 2025 - Present

Portside, Inc. — Remote, Canada

Portside, Inc. provides enterprise-grade solutions for flight operations, scheduling, and crew management across the global aviation industry in 30 countries.

- Spearhead end-to-end development and maintenance of a **C# / .NET MAUI cross-platform mobile application used daily by 1000+ pilots** for real-time flight schedule access and in-flight activity logging.
- Designed and implemented an **offline-first architecture** using SQLite synchronized with **Microsoft SQL Server**, enabling real-time updates and uninterrupted workflows in low-connectivity environments, reducing sync failures by 90%.
- **Debug and optimize SQL Server queries** and stored procedures, cutting average query time by 50% and ensuring reliable backend and API integrations for the mobile app.
- Orchestrate **iOS (App Store Connect) and Android (Google Play)** releases, overseeing versioning, build pipelines, and production deployments across 20+ releases.

Full Stack Developer (Full-time, 8-month Intern) — Jan 2023 - Apr 2025

JCA Technologies, PTx Trimble — Winnipeg, MB

JCA Technologies develops autonomous kits for tractors, enabling self-driving capabilities to perform core agricultural activities such as tillage, harvesting, planting, and precision field operations.

- **Wind Tools (.NET and VueJS)**: Developed and maintained cross-platform .NET web services and the VueJS front end on Windows and Linux, offering reliable communication with microcontrollers via Wi-Fi, CANbus (SAE J1939), and USB, supporting 50+ engineers.
- **Automated Build Process**: Optimized CI/CD pipelines by automating Jenkins workflows and refining the Jenkinsfile, reducing build times by 20% and ensuring reliable deployments for web and mobile applications.
- **Cloud-Based Mobile Solution**: Implemented a mobile app variant of Wind Tools services using .NET MAUI with AWS S3 integration, providing secure cloud-based file management for field technicians and improving accessibility.
- **Diagnosed and resolved integration issues** in Wi-Fi (TCP) and J1939 data transfer using Wireshark and CAN utilities, achieving 100% system reliability; resolved 60+ JIRA issues for internal and external stakeholders with minimal agricultural operations disruption.

Software Developer Intern May 2022 – Aug 2022

Manitoba Center for Health Policy Winnipeg, MB

MCHP is a research unit at the University of Manitoba that develops and maintains a comprehensive data repository of de-identified health and social data to support policy-making for the province.

- **Modernization of Metadata Repository**: Independently migrated a web system from HTML, CSS to Django framework, enhancing its accessibility across multiple browsers beyond Internet Explorer.
- **Database Migration**: Wrote Python scripts to transfer 100+ Excel files to a MySQL server that consolidated them into 10 tables, minimizing data redundancy.
- **Installation Guides**: Documented user/developer installation processes as well as implementation details, aiming to reduce onboarding time by 7 hours.

Education

University of Manitoba Winnipeg, MB

Bachelor 's of Science, Computer Science Honours with Co-op *Sept 2019 – Apr 2024*

- Cumulative GPA: 4.2/4.5 | Dean's Honours List
- Relevant Coursework: Computer Graphics, Networks & Security, Software Development
- Teaching Assistant for 3000-level CS courses

Projects

Jewelry Ledger | https://github.com/bhautiksojitra/jewelry_ledger

- Collaborated with a team of 5 developers to deliver a Kotlin-based Android application for storing, browsing, and searching recipes. **Led the testing and QA strategy**, developing unit and integration test suites with JUnit and Espresso that achieved 91% code coverage.

OpenGL Smoke | https://bhautiksojitra.github.io/posts/smoke-simulation/

- Build a mobile app using Flutter and Google Firebase, offering paperless financial-records tracking for my dad's workshop. Automate 50% of financial record-keeping, leading to a 15% reduction in work hours.

iRecipe (Android Application) | https://github.com/ngocpham1994x/iRecipe

- Implemented a real-time smoke simulation using the Navier-Stokes equations, accurately modeling fluid dynamics for realistic visual effects. Optimized performance with GPU parallel processing, achieving a 35% speed increase over CPU-based implementations.
